

UV-126-HBS

The MaxVac UV-126-HBS uses new generation cordless brushless technology to provide high power with very low current draw. Using either 20 or 30AH batteries it can operate for up to 1.5hours.

The vacuum is powered by one brushless motor. Being brushless means the vacuum is completely waterproof (IP54 rated) and can be washed down to remove contamination within the vacuum.

Fitted with H Class filters the vacuum ensures a high efficiency of filtration. The filter is protected by a micro pre-filter. The exhaust air can be funnelled through a pipe to take away from the area of work if needed.

The vacuum has a bin system to collect waste. It can be fitted with a bag as needed. The vacuum also has large wheels for ease of transport and has a collapsible handle for moving it around.

RECOMMENDED ACCESSORIES

FEATURES

Large wheels

- Ease of transport on rough areas
- Easy to take up stairs
- High stability

Cordless

- Allows remote working in powerless areas
- Excellent for cleaning new houses before handover

Brushless Motors

- Waterproof
- Low power draw
- Longer life

Model	UV-126-HBS
Voltage	Cordless
Battery	36V lithium-ion
Filter Type	Cartridge
Air Flow	230m ³ h
Capacity	33L
Battery Life	1hr (4hr charge)
Noise Level	69dB(A)
Dimensions (cm)	45w x 54d x 70h
Weight	14Kg

FILTER CLASS
